

ABOUT RAE

The RAE platform and its building blocks streamline complex legal or administrative procedures, connecting all public and private stakeholders.

RAE resolves the challenges related to multifaceted procedures:

TRANSPARENCY

All parties involved gain insight into and control over complex procedures. Individuals, companies, and official instances can follow up on their own files, governmental and legal institutions can consult and control cases more accurately and detect irregularities sooner.

EFFICIENCY

Digitizing and streamlining procedures critically increases the speed of the process from beginning to end, thus saving resources. Also other procedural costs, such as printing, transport, meeting rooms, such as printing & postage, transport & meeting rooms, etc. diminish drastically.

SECURITY

The platform and software allow stakeholders to exchange files and documents easily and safely. All information is stored online, protected by the highest security standards.

SIMPLICITY

Users are assigned to their proper role, and receive the correct information and tasks in the course of the procedures.

THE REGSOL CASE

Until recently, Belgian insolvency files were handled on paper. All parties involved in the legal handling of insolvency files (such as bankruptcies, judicial reorganisation procedures,...) had to go through the registry of the court of commerce to access and provide information on a given file.

Since 2017, the process - from the first decision to the last signature - has been digitized by Aginco. We were selected to create RegSol, the Belgian Central Solvency Register, customizing our RAE building blocks for the specific stakeholders.

RegSol.be consists of a private and a public section, so both courts, as well as citizens and companies can access it. Each stakeholder is assigned a set of tasks, according to their role. And each case follows a complex and multi-forked path from

commencement to completion. RegSol notifies stakeholders to take action at the appropriate time, clarifies formal language for the layman, and flags irregularities to law enforcement bodies.

The Central Solvency Register has transformed insolvency procedures, boosting security, transparency and efficiency. RAE provides a significant reduction in time and costs, and lightens the workload of all parties involved.

The Aginco team was deeply involved in the analysis, design and building of the RegSol platform. We have also set up a live help desk, and continuously train professional stakeholders such as creditors (and their lawyers) & courts so they can fully reap the benefits of RegSol.

ABOUT AGINCO

Aginco is an Agile Incubator Company. We build powerful cloud-based platforms, streamlining complex formal procedures with multiple stakeholders.

Since 2013, we have been developing and implementing multiple software solutions. Our core application is RAE, a next-generation platform that resolves multiple challenges related to administrative and legal procedures.
