

Case study

Countroll

1 Countroll app

Hannecard is one of Europe's leading suppliers of industrial roller coverings. Together we developed the Countroll IoT platform, which helps them to improve their customer service by smart monitoring and to realize a paperless supply chain. Hannecard's industrial customers optimize their processes based on the intelligent asset management solution for rollers.

The insights in the usage of the rollers and the physical parameters (rotations, temperature, vibrations, ...) facilitates the optimization of the industrial processes where the rollers are used and is the basis for predictive maintenance of the covers on the rollers.
