## CNHi - Harvest coordination app

# 1 CNHi Harvest Coordination app

CNH industrial is specialized in agricultural vehicles. In collaboration with CNHi, Axians designed and developed the Harvest Coordination app, a mobile application that simplifies coordination during the harvesting process for all parties, including the contractors. Combine downtime is avoided for optimal efficiency. The automatic reporting based on the sensor data not only provides a detailed overview of the nutritional values of the product, but also offers traceability on much smaller batches. Artificial Intelligence was used to measure losses and adjust the settings of the combine harvester.
