Detection of anomalies in invoices

Increase the efficiency of claims management at DAS by automating the decision-making process for disputing invoices.

Challenge

In insurance companies, every invoice must be analysed to determine whether it is abnormal or not. This is a time-consuming and tedious task that requires expertise in this area.

Solution

Our algorithms predict whether or not an invoice is disproportionate regarding a specific task.

Results

More invoices can be disputed, resulting in a significant financial gain. Manual work is also significantly reduced.
