

Reserve funds estimates

Provide a highly accurate estimate of the reserve for the coming years and predict the optimal amount to keep.

From **3** to **1**
year for a good
estimation

7€
Of error
margin

Challenge

When a new damage case is opened, it is crucial for insurers to assess the associated cost. In addition to being as accurate as possible, this estimate must be made as quickly as possible, due to its strategic implications.

Solution

Our algorithms predict the amount that will have to be paid, as well as the actions that will have to be carried out.

Results

Since the first year, the estimate's accuracy is very high and is comparable to the quality of a manual estimate after 3 years. The estimate is so accurate that the margin of error does not exceed 7 euros. The time saving is also considerable.
