Challenge

The transition to automated systems may raise fears among employees. They would like to be able to validate the decision of AI models.

Solution

When AI models find that their predictions do not reach a specific quality threshold, these predictions are displayed on the interface. The end user can then validate or not the models' decision.

Results

This human-machine collaboration ensures very high quality and efficiency, in addition to a smooth adoption of the technology. The user experience is optimal.

Validation user interface

Skwiz, our automatic document data extraction product, has a validation interface to enable optimal human-machine collaboration.
